Profile Summary

Web developer focused on building modern websites and marketing systems that help businesses capture leads, improve conversions, and streamline operations.

I specialize in developing high-performance websites, SEO-optimized landing pages, and CRM-integrated funnels using structured development workflows. My approach combines web development, automation, and AI-assisted engineering to deliver scalable and efficient digital systems.

With strong prompt engineering skills, I leverage AI tools strategically to accelerate development, problem solving, and system implementation while maintaining clean architecture and reliable performance.

Core Expertise

Web Development
